***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 107,108,111,112,115 and 116 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson in view of Kemp.

In Johnson, see header, jambs and sill 12, insert tracks 102, and screen tracks 112,114, spring biased roller assembly 30, fabric module 34, fabric 36, inserts 16,18 and screen-end member 40. What is not shown is the screen end member actually being located in a screen track. However, such is well known, as illustrated by Kemp at 30 (track) and 138(crossbar), page 3, right column, lines 64-70. It would have been obvious to provide Johnson with such a crossbar and track to provide close tolerances between the crossbar and track and to fully support the leading edge of the screen.

Claims 109,110,113,114 and 117 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson in view of Kemp as applied above and further in view of Ralph et al.

Ralph et al discloses that it is old to provide counterbalances, 60-63, and latches 100 on sliding sashes in a door. It would have been obvious to modify Johnson to have these features so as to improve operation and hold the sash in position.

### ***Response to Arguments***

Applicant's arguments have been fully considered but they are not persuasive. Applicant asserts that Johnson will not have the desired clamping effect on the edges of the screen if the screen end member, taught by Kemp, is likewise located within the screen track. However, such would suggest a direct structural incorporation of the Kemp into Johnson and such is not proposed. Johnson could clearly have such a screen end member as proposed above in the rejection which does not interfere with his clamping means. This could occur, for example, by having the clamping means end just short of the screen end member when the screen is fully extended or by having the screen end member extend laterally into the screen tracks but not as far as to interfere with the clamping members. Viewing the combination of Johnson and Kemp another way, Kemp is teaching a screen track in combination with his screen structure, both of which may be applied to Johnson. In other words, it would have been obvious to apply the screen device, including the leading edge member, and the screen tracks of Kemp to Johnson.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
